

# S60XD Heavy-Duty Vertical Baler

 [www.ecotainer.ca](http://www.ecotainer.ca)

**The S60XD is the most versatile, heavy-duty vertical baler available in its class.**

The S60XD Vertical Baler offers a unique combination of power and flexibility for any application. The large 7" cylinder and the extra long 64" stroke provide the power to make the highest density bales available in its class. This power also enables the user to bale a variety of materials including corrugated containers, newspaper, and aluminum cans, as well as other recycle material.

The incredible density achieved by the deep penetration, to within 10" of the floor, and the 92,360 pounds of force generated by the compression ram, insures that you will get consistent, high quality, heavy bales, in any material without costly fluffing or preconditioning. By producing fewer, heavier bales, you save money on labor and transportation costs, and your baled materials will bring in a higher market value than loose, bulky material.
